

Mersey Tidal Power

Cheshire Biodiversity Partnership

20 January 2011

The UK has committed to 15% Renewable Energy by 2020

Over 30% of our electricity will need to be sourced from renewables by 2020.

Fuels used to generate electricity in UK 1948–2008. Source: DECC 60th Anniversary: Digest of United Kingdom Energy Statistics, July 2009.

Projection of potential UK electricity supply by fuel 2006–2025. Source: DECC Energy and Emissions Projections, June 2010.

Climate Change Act 2008 has committed the UK to legally binding targets to reduce greenhouse gas emissions: a reduction in emissions of at least 34% by 2020, and at least an 80% by 2050, compared to 1990 levels.

UK demand for electricity is expected to more than double by 2050 as low carbon sources of energy are required for heating and transport.

Ocean Gateway – Atlantic Gateway

Energy schemes play an important role supporting sustainable development

Innovation - Energy, Waste and Water

The Resource : Mersey Estuary

Tidal resource

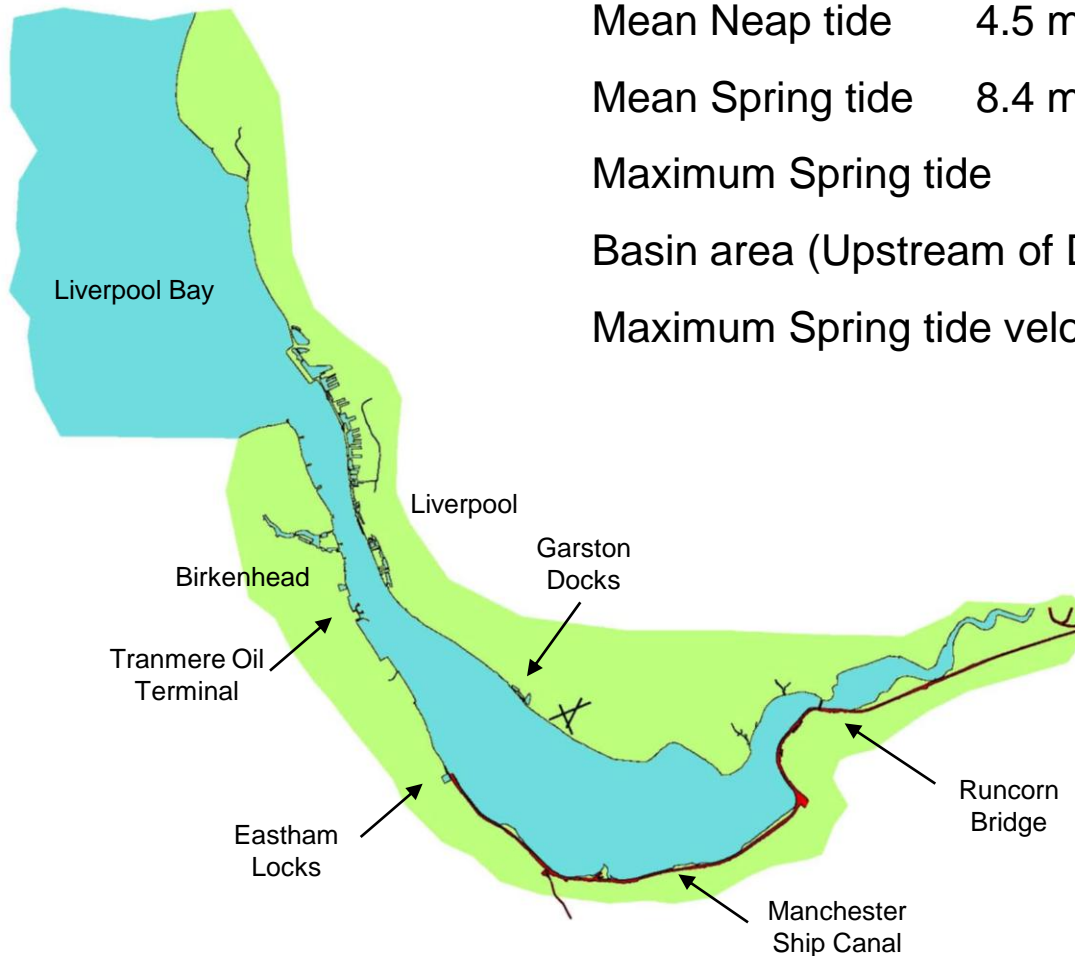

Mean Neap tide 4.5 m (190 M m³)

Mean Spring tide 8.4 m (350 M m³)

Maximum Spring tide 10.5 m

Basin area (Upstream of Dingle) 60 km²

Maximum Spring tide velocity 5.2 knots / 2.7 m/s

The Opportunity : Potential Benefits

- The first large scale tidal energy project in UK – of global significance
- Secure low carbon electricity
 - enough for a significant proportion of the homes in the Liverpool City Region
 - helping to meet the UK's carbon reduction commitment 15% by 2020, 80% by 2050
- Regeneration / low carbon economy
 - Jobs in construction and operation, and associated activities
 - Training, skills, research & development in renewable energy technologies and associated services
 - Renewable energy / tidal technology supply chain
 - Tourism & leisure – visitor centre destination, enhanced use of Mersey
 - Infrastructure – grid reinforcement, access
 - Supporting sustainable / low carbon development
- Flood defence

Scheme Objectives

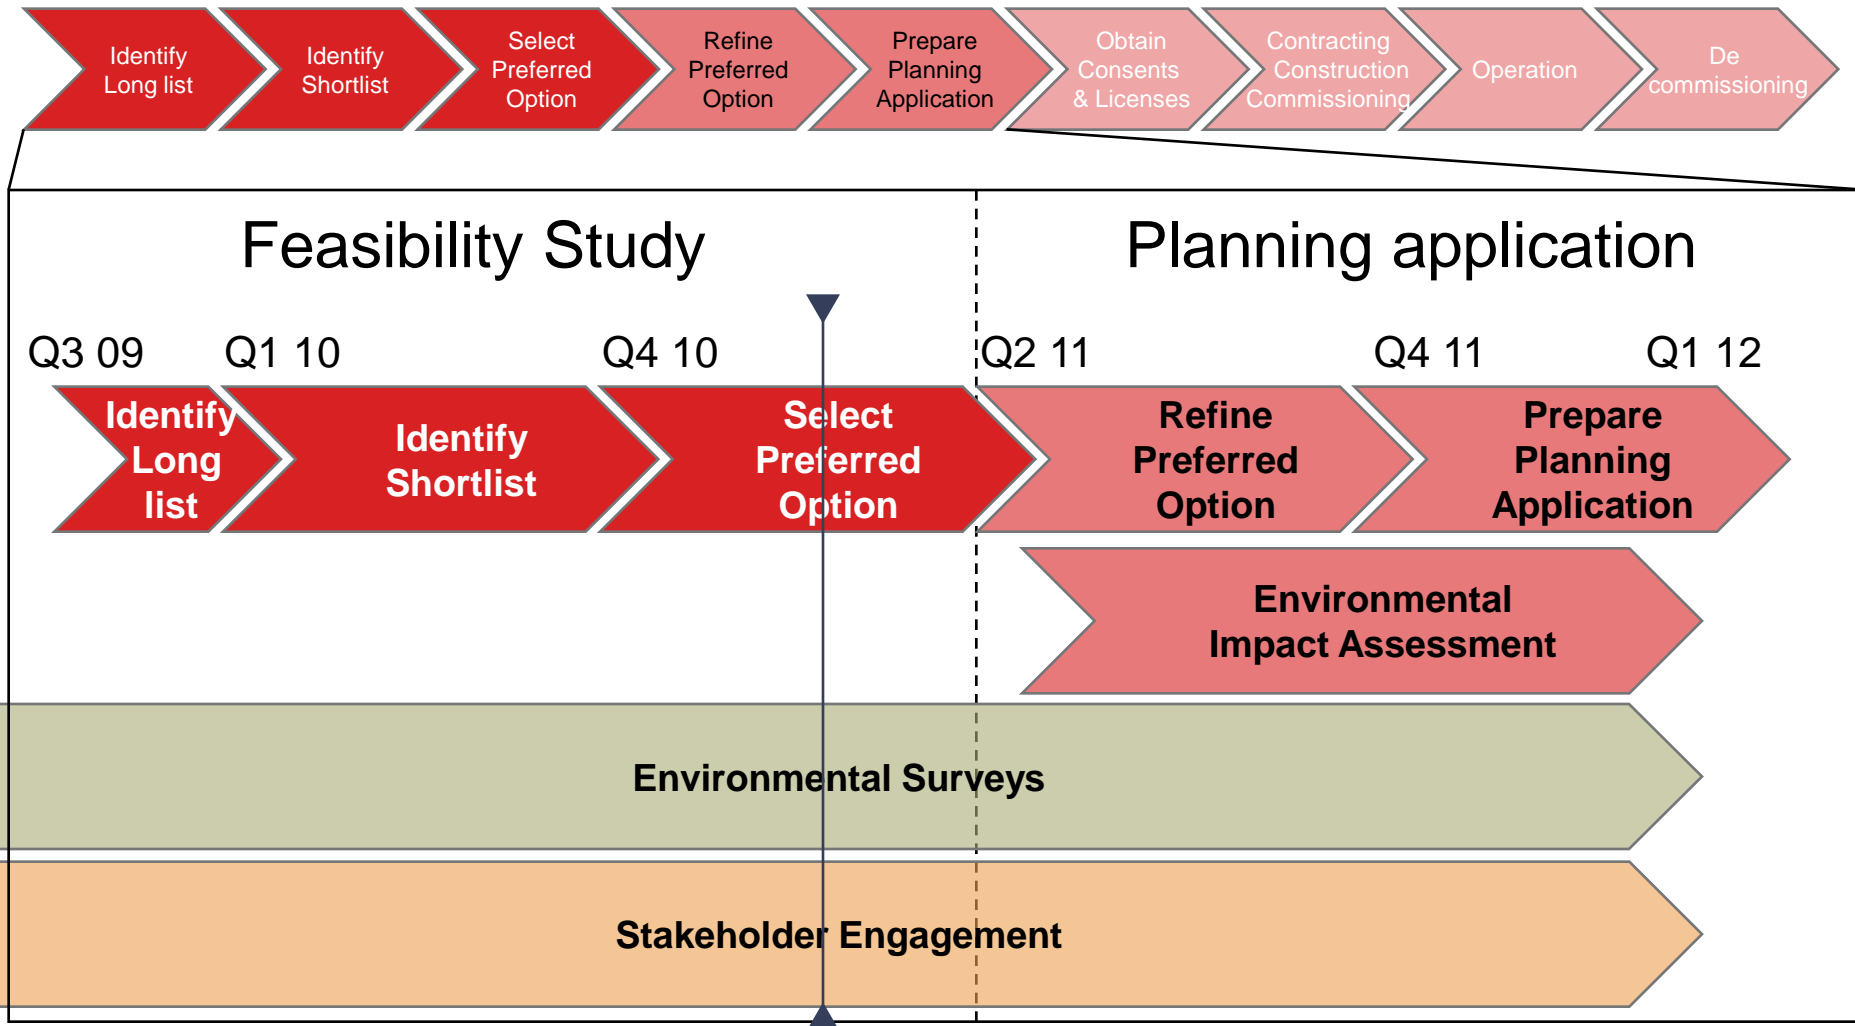

- To deliver the **maximum amount of affordable energy** (and maximum contribution to carbon reduction targets) from the tidal resource in the Mersey estuary with **acceptable impacts on environment, shipping, business and the community** either by limiting direct impact in the Mersey estuary or providing acceptable mitigation and/or compensation

and in doing so:

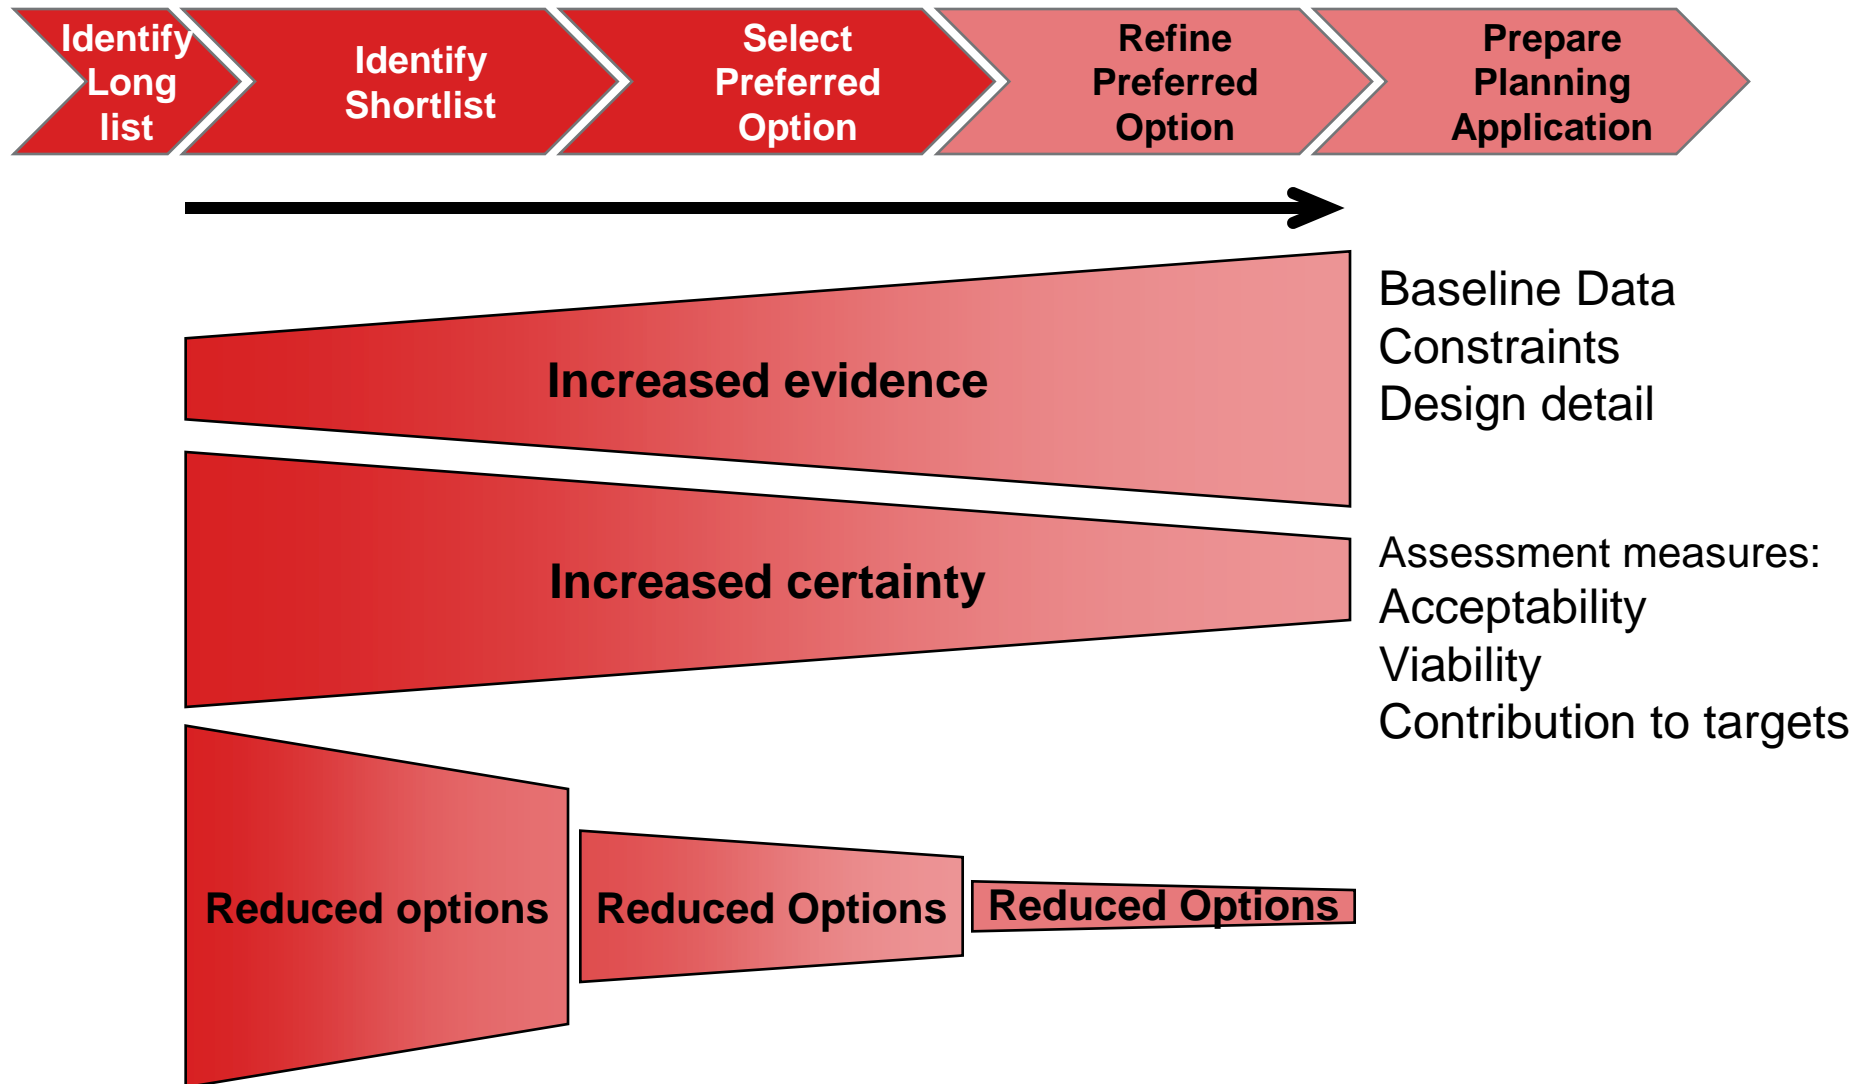

- To **maximise social and economic benefits** from the development and operation of a renewable energy scheme, including where appropriate:
 - development of internationally significant facilities and skills to support the **advancement of renewable energy technologies and their supply chains**
 - improvements to **local utility and transport infrastructure**
 - improvements to **green infrastructure and environmental assets**
 - development of a **leisure opportunity and tourist attraction**.

Contributing to 2020 Renewable Energy targets

Towards a consent on a deliverable scheme

Decision Making Framework

Stakeholder Engagement since April 2010

Key Stakeholder Advisory Group – 29 April & 28 September

Environment Advisory Group Meeting – 22 April, 3 June, 9 December

Northwest Tidal Energy Group – 11 May

Navigation Stakeholder Meeting – 18 May & 14 Dec

Low Carbon Liverpool Seminar – 27 May

Mersey Estuary Forum – 2 July

Design Advisory Group Meeting – 4 Aug & 14 Dec

RSPB 'Mersey Mission' Meeting – 9 September

Cheshire Wildlife Trust – 24 September

Relaunched Project Website – September 2010

Ebriefing 1 – October 2010

Round One Public Consultation – Dec 2010 to Feb 2011

Key Stakeholder Advisory Group

Technical Groups

Environmental

Design

Navigation

Planning Policy

Sustainability and Climate Change

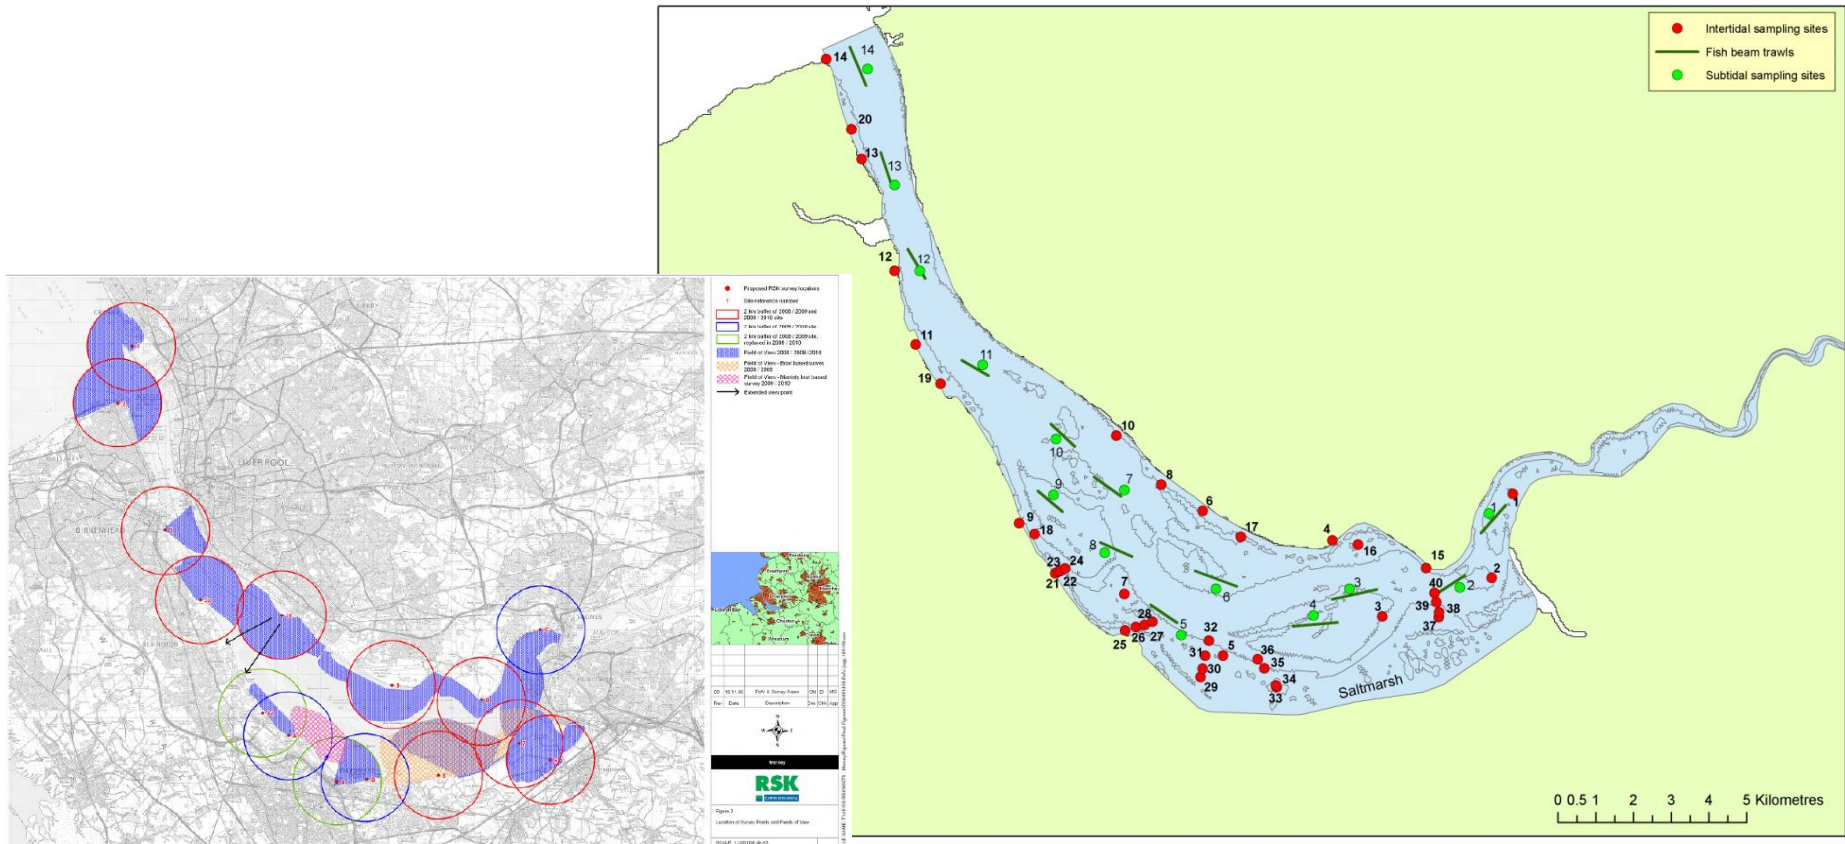

Investment & Implementation

Wider Forum

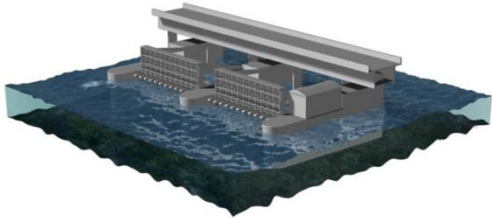

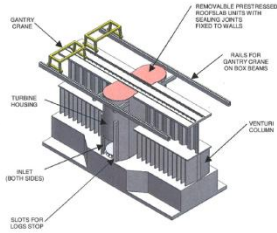

Local Communities Panel

Environmental surveys are ongoing

- Birds: two full years; winter, breeding and passage (Oct 2008 – present)
- Aquatic ecology: autumn 2009, spring 2010, autumn 2010

Stage 1 of the feasibility study identified four potential technologies

CONCEPT	OPTION	
Impounding scheme	Tidal Barrage	
Very low head barrage	Tidal Power Gate / Very low-head turbine	
Tidal fence	Horizontal or Vertical axis Turbine	
Tidal fence	Spectral Marine Energy Converter	

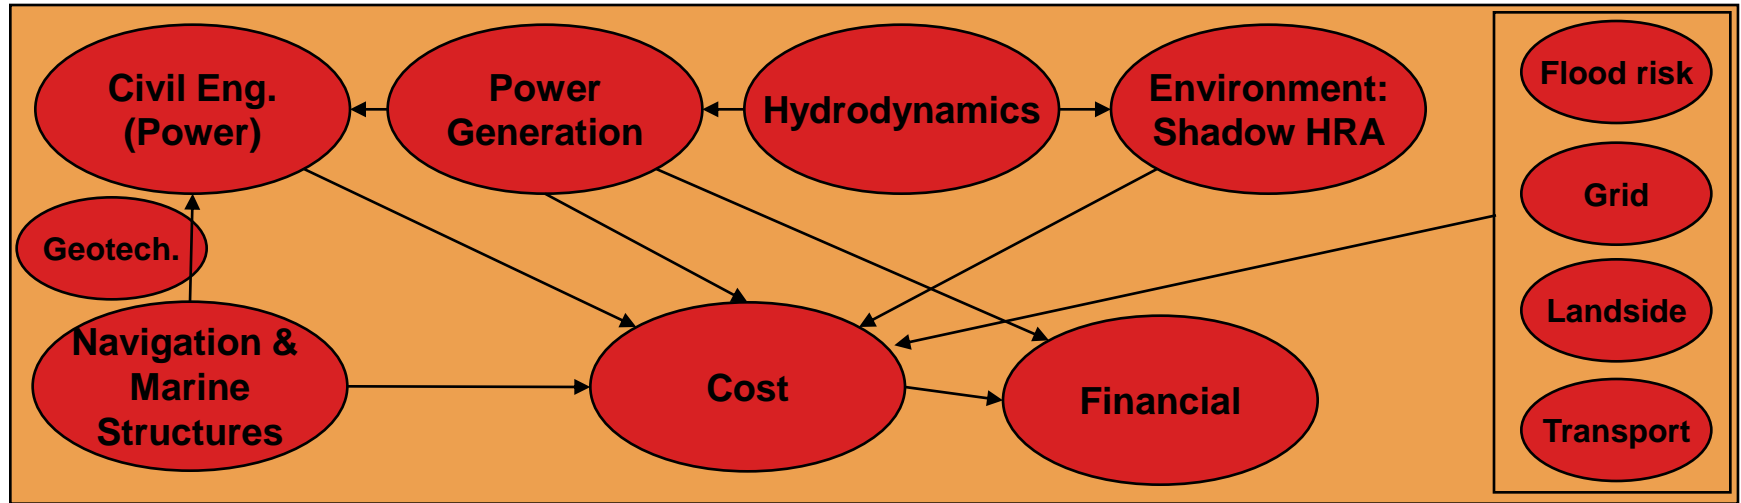

Scheme alignment bands for initial study to inform options

Shortlist three of the twelve options; ultimately chose one

	BAND C	BAND A	BAND B
TECHNOLOGY OPTIONS			
Impounding Barrage	O	<input checked="" type="radio"/>	O
Tidal Power Gate (VLH turbine)	O	O	<input checked="" type="radio"/>
Tidal Fence	O	<input checked="" type="radio"/>	<input checked="" type="radio"/>
Spectral Marine Energy Converter	O	<input checked="" type="radio"/>	O
NAVIGATION OPTIONS			
	Locks + ?	4 variants using different lock layouts, new channels and an extension to the Ship Canal	Single option with boat lock at Garston abutment

Stage 2A

- Acceptability
- Performance Improvement
- Mitigation

Constraints

Sustainability Indicators
Carbon Lifecycle
Socio Economic benefit

Sustainability Appraisal

Scoping Report consultation period ended 31st August - comments received from a range of consultees now being addressed

21 indicators cover an appropriate range of environmental, social and economic issues

SA/SEA not mandatory but sustainability appraisal framework enables balanced consideration of likely positive and negative impacts of options

Environment

- Internationally and nationally designated nature conservation sites
- Species and habitats of conservation importance
- Habitat creation or ecological enhancement
- Levels of flood protection
- Character and accessibility of places, landscapes and heritage assets
- Lifecycle carbon balance of the development
- Utilities infrastructure and resources
- Waste production, reuse and recycling
- Ecological status or potential of the Mersey Estuary and other water bodies (in relation to the Water Framework Directive)
- Emission of air pollutants
- Land quality

Society

- Transport infrastructure
- Amenity for recreation, tourism and leisure
- Human health and wellbeing
- Education and skills training

Economy

- Local business and jobs
- Inward investment and image
- Technological innovation
- Commercial navigation
- Generation of renewable energy from the Mersey Estuary
- Commercial fish stocks

Proposed Long List of Options

Tidal Barrage

Ebb Flow Generation: Impact on Tidal Range

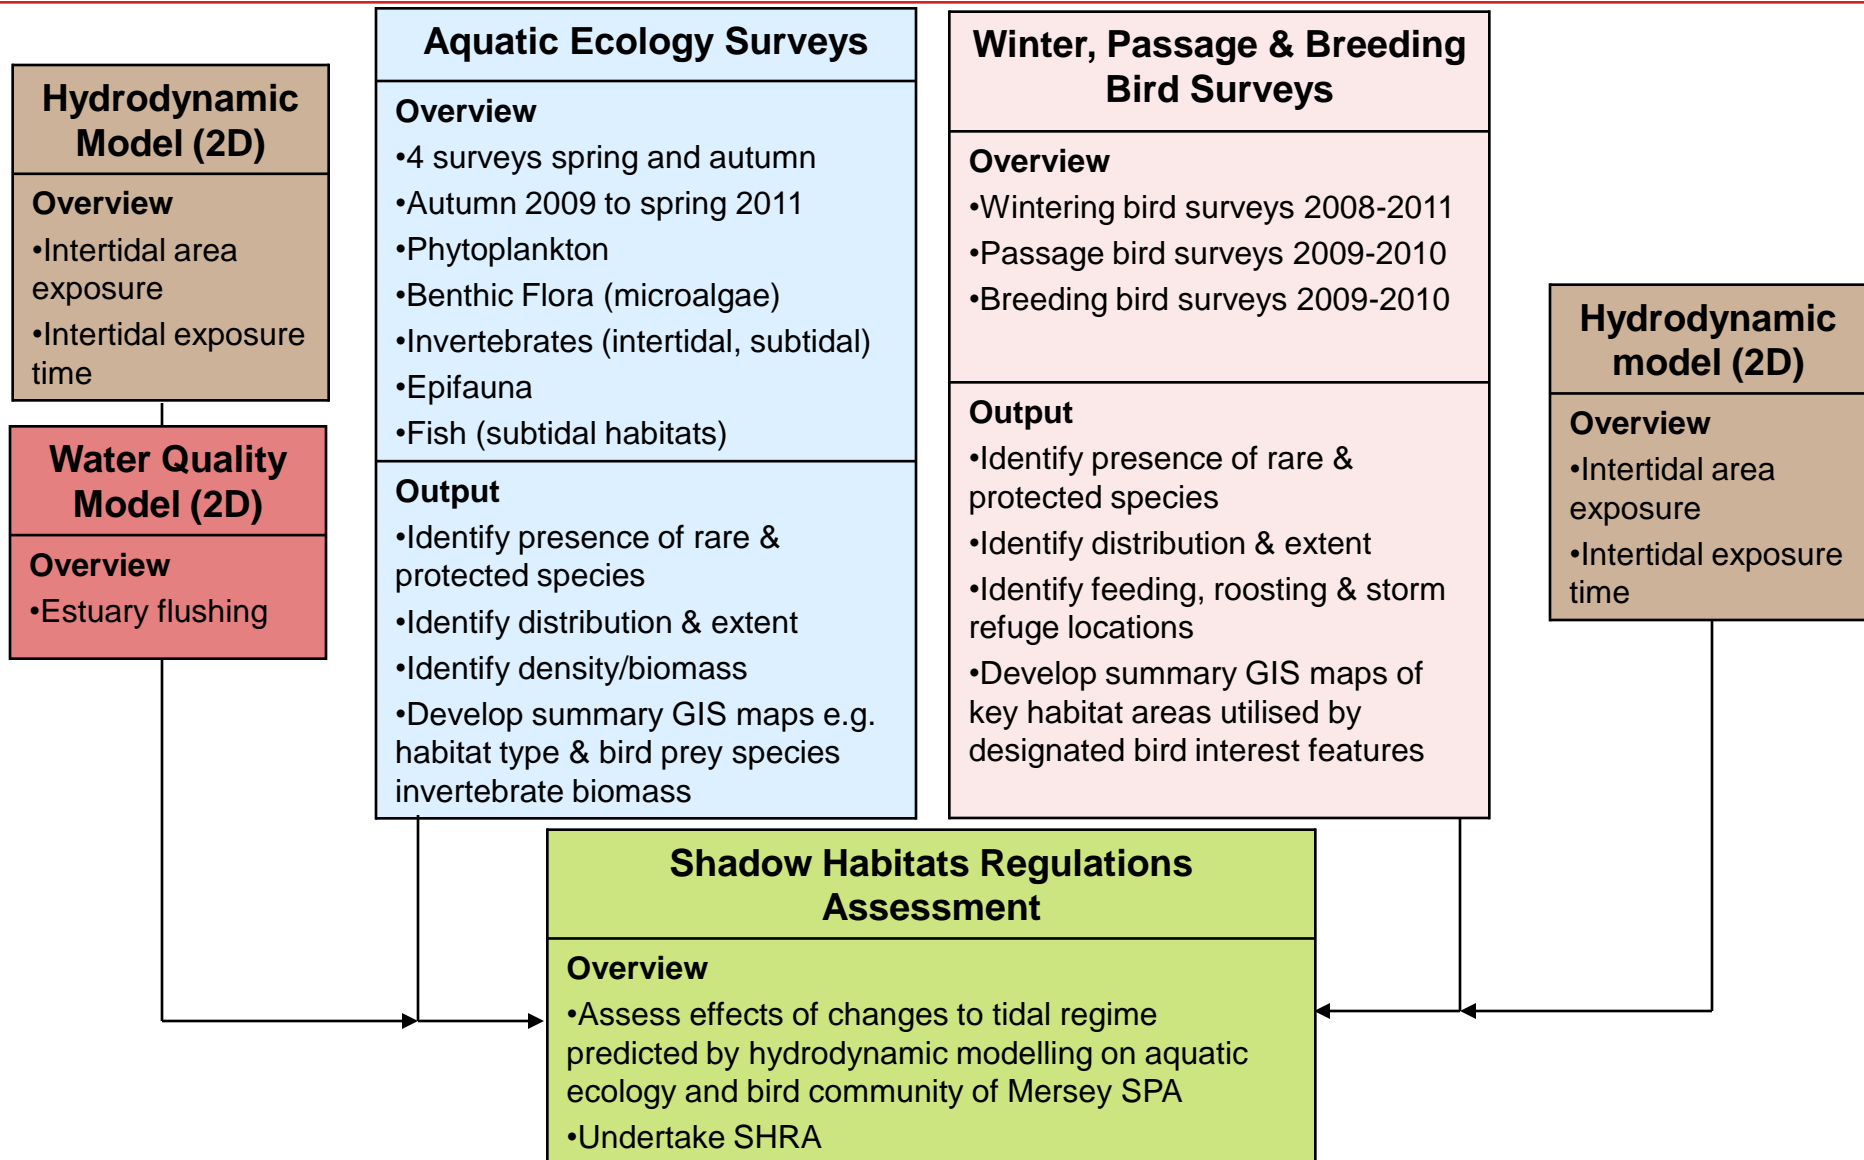

Proposed Long List of Options

Tidal Fence

Typical Impact on Tidal Range

Overview of Ecological Assessment Process – Current Assessment

Each technology may have a number of variants

- Turbine choice & design – operating head, discharge rate, speed of rotation
- Full or partial barrier
- Alignment
- Positioning of turbines / sluices / locks
- Number and size of turbines – flow rate, required head
- Operating regime
 - Operating head / time tide held back on low and high tide
 - Ebb, Flood or Ebb and flood generation
 - Sluicing
 - Pumping

Impounding Barrage – Band A

Mode of Operation	Installed Capacity	Annual Energy Output
High head, ebb generation	700 MW	900 GWhr

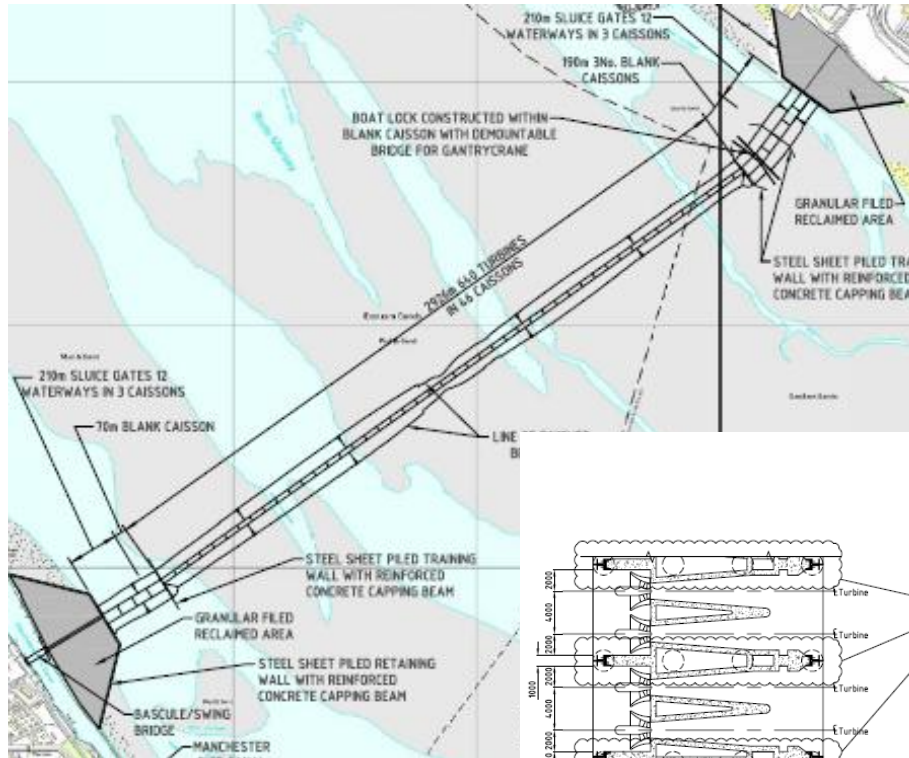

Type	Bulb
Runner Diameter	8 m
Mechanical Output	25 MW
Rated head	~ 6.00 m
Number of units	28

Low head barrage / Tidal Power Gate

Low head barrage / Tidal Power Gate – Band B

Mode of Operation	Installed Capacity	Annual Energy Output
Low head, ebb generation	256 MW	400 GWhr

Type	EcoBulb or Hydromatrix
Runner Diameter	1.45 m
Mechanical Output	400 kW
Rated head	~ 3.00 m
Number of units	640

Tidal Fence modified current velocities

Mersey Tidal Power
Velocity Profile for 300 m Wide Channel
Line A Invert Level -14 mCD

Tidal Fence – Band A and B

Mode of Operation	Installed Capacity	Annual Energy Output
Band A bi-directional	17 MW	27 GWhr
Band B bi-directional	14 MW	17 GWh

Type	Open stream	
Runner Diameter	5 m	
Mechanical Output	500 kW (A)	600kW (B)
Number of units	34 (A)	24 (B)

Spectral Marine Energy Converter – Band A

Mode of Operation	Installed Capacity	Annual Energy Output
bi-directional	n/a*	n/a*

* Project team unable to verify figures provided by Verderg: 240 MW, 639 GWhr

Stage 2 assessment of four potential technologies

CONCEPT	OPTION	Capacity	Output
Impounding scheme	Tidal Barrage	700 MW	900 GWh
Very low head barrage	Tidal Power Gate / Very low-head turbine	256 MW	400 GWh
Tidal fence	Horizontal or Vertical axis Turbine	17 MW	27 GWh
		14 MW	17 GWh
Tidal fence	Spectral Marine Energy Converter (SMEC)	240 MW	639 GWh

Stage 2 Assessment

Stage 1 - 
 Stage 2 - 
 Stage 3 - 

Key

 No significant issues
 Potentially significant issue(s)
 Significant issue(s) / showstopper(s)
 Value

	Technically Acceptable				Consenting: Acceptable					Financially Acceptable					Contribution to Targets			
	Physical Conditions	Maturity	Warranty Risk	Overall Technical Risk	Environment	Economic (Shipping)	Economic (Business)	Social (community)	Overall Consenting Risk	Commercial returns	Cash flow	Grant/Subsidy/Tariff	Financing	Overall Comm./Fin. Risk	Energy yield (GWh)	Carbon Balance (relative)	Cost of Energy (relative)	Socio Economic GVA (relative)
Impounding Barrage IBv1															900	1.0	1.00	1.0
Very Low Head Barrage VLHBv1															400	0.56	1.85	0.8
Tidal Fence TFv1															27	-0.02	16.6	0.5
Tidal Fence TFv2															17	-0.02	17.8	0.3
SMEC SMECv1															639	0.68	1.02	0.7

Location options – landside constraint assessment

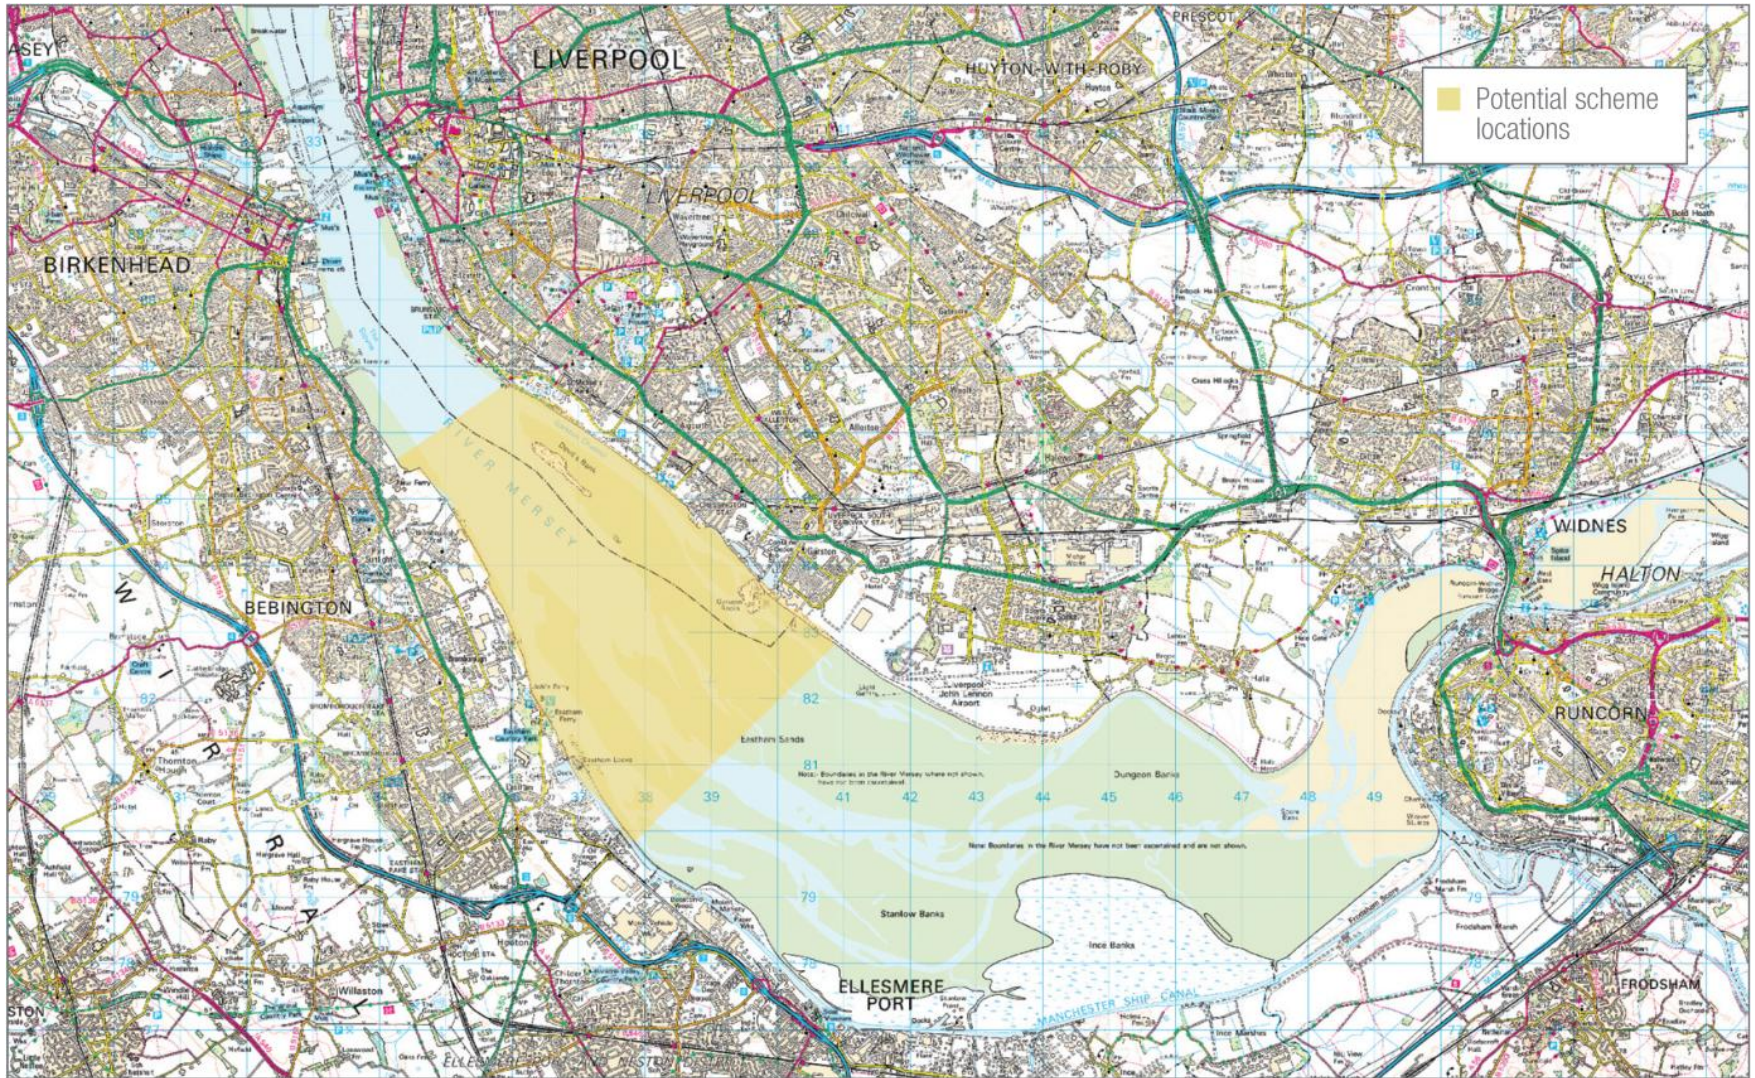

Band C – heavily constrained by
landside and navigation uses, poor
access, poor planning case: least
feasible

Band C to Band A – very heavily
constrained by landside and
navigation uses: not feasible

Band A to Band B – moderately constrained by landside and navigation uses, some access, some opportunities to complement regeneration initiatives, moderate planning case: most feasible

Location

0-D modelling of potential impact of operating head on basin level

Low head operation ebb-only generation : no limit on head difference

Very low head ebb-only generation : limiting head difference to ~3m
